COMPANY Y

Access Control Policy

Version: 2.0

Company Y requires multi-factor authentication for production accounts.

Access to production systems is approved by the Security Team. Employees use individual accounts; shared administrative credentials are prohibited.

Access is granted through defined roles (RBAC) on a least-privilege basis for every application. Role owners must be documented.

Privileged accounts require phishing-resistant hardware MFA (FIDO2/WebAuthn).

Access to defense AI workloads and CUI environments is limited to verified U.S. persons. Verification is completed and recorded before access is granted.

Privileged access and role assignments are re-certified every 90 days.

Owner: Security Team
